CERTIFICATE

Agency Name Texas AgriLife Research

This is to certify that the information contained in the agency Legislative Appropriations Request filed with the Legislative Budget Board (LBB) and the Governor's Office of Budget, Planning and Policy (GOBPP) is accurate to the best of my knowledge and that the electronic submission to the LBB via the Automated Budget and Evaluation System of Texas (ABEST) and the bound paper copies are identical.

Additionally, should it become likely at any time that unexpended balances will accrue for any account, the LBB and the GOBPP will be notified in writing in accordance with Article IX, Section 7.01 (2008-09 GAA).

#### Mission and Scope

The mission of Texas AgriLife Research, formerly known as the Texas Agricultural Experiment Station, is to conduct research that benefits consumers and the agricultural industry; maintains and enhances the environment and natural resources; ensures a safe, wholesome and affordable supply of agricultural products; and contributes to the state's economic vitality. Texas AgriLife Research is a state agency under The Texas A&M University System Board of Regents.

AgriLife Research is the only public agency in Texas with a statewide mission to carry out research programs in the agricultural, environmental, and life sciences. Current priority research areas include sustaining healthy ecosystems and conserving our natural resources, enhancing the competitiveness and prosperity of urban and rural agricultural industries, improving public health and well-being, and conducting fundamental and translational research.

Our research programs serve the entire state. Our scientists operate out of 13 research and extension centers located around the state; 14 academic departments of the College of Agricultural and Life Sciences and 5 academic departments of the College of Veterinary Medicine and Biomedical Sciences, both at Texas A&M University; and agricultural components of other universities within and outside of the Texas A&M University System. In addition, our regulatory functions support Texas feed and fertilizer and honeybee industries. Our scientists conduct research with many state and federal agencies and with the private sector to carry out our programmatic mission and to maximize our research impacts on Texas producers and consumers.

Investment in research in agriculture, natural resources, and the life sciences is critical to the future of Texas, the nation and the world. Our economists estimate a \$1 investment in agricultural research results in direct returns to the Texas economy of more than \$1.50. Indirect returns increase this significantly.

Challenges facing Texas, the nation, and the world are growing and becoming more complex, including terrorist threats to our food supply; increasing population and industrial growth putting pressures on the state's natural resources; increased conflicts between use of agricultural commodities for food or fuels; and growing demand for state of the art technologies, systems and management practices to sustain agricultural production and to enhance the quality of our natural resources in both rural and urban settings. Continued investment in the state's capacity to conduct research in agriculture, natural resources, and the life sciences is necessary if we are to meet these challenges.

Impacts of Research by Texas AgriLife Research on Texas Consumers and Agricultural Producers

**ADMINISTRATOR'S STATEMENT**  
81st Regular Session, Agency Submission, Version 1  
Automated Budget and Evaluation System of Texas (ABEST)

DATE: **9/3/2008**  
TIME: **2:33:22PM**  
PAGE: **2 of 5**

---

Agency code: **556** Agency name: **Texas AgriLife Research**

---

A few recent examples of impacts of research by Texas AgriLife Research scientists, grouped by research priorities in our current strategic plan, include:

Sustaining healthy ecosystems and conserving our natural resources

\*As a result of irrigation efficiency technologies developed by our scientists, farmers have saved 490,000 acre-feet of water from the Edwards Aquifer, which has a value of \$3.4 million.

\*We developed a more water efficient rice variety that can annually save Texas 125,000 acre-feet of water.

\*Our scientists developed and implemented soil and water conservation practices on Fort Hood training lands that reduced sediment losses from training areas by 98%. These practices had added value because they involved using 22,000 tons of compost from the total maximum daily load-restricted North Bosque River watershed, which is equivalent to removing over 230 tons of nitrogen and 120 tons of phosphorus that could have impacted the Bosque River and Lake Waco systems.

\*We developed rangeland restoration techniques that increase water supplies in the Edwards Plateau and South Texas Plains regions, with the added benefit of improving range condition and addressing endangered species concerns. In this region, converting 1000 acres of juniper woodland to native rangeland can increase water available for annual aquifer recharge and streamflow by an acre-foot. This would satisfy the annual needs of 500 Texans.

\*Our scientists developed cost-effective management options (e.g. targeted, small-scale nutrient fertilization and population enhancement of competing species that are toxic to golden algae) to circumvent golden algae blooms in Texas lakes. These blooms have resulted in losses ranging between \$10 and \$20 million.

Enhancing the competitiveness and prosperity of urban and rural agricultural industries

\*Our scientists have shown using stored soil nitrogen can result in significant fertilizer cost savings, especially during this time of historically high fertilizer prices. Relying on stored nitrogen can reduce the amount of fertilizer applied by 55 pounds per acre (equivalent to annual savings of \$36 per acre or over \$90 million dollars for the 2.5 million acres planted in the South Plains).

\*Research by our scientists has shown that adding fine limestone to soils increases soil fertility and forage production, resulting in annual costs savings of \$1 million to East Texas farmers and ranchers.

\*South Plains irrigated cotton yields have doubled to 2 bales per acre from 2000 to 2006. These yield increases are due in large part to technologies developed and implemented by our scientists, namely eradication of the boll weevil, adoption of improved irrigation systems (which also reduces water use), and new varieties. These improvements increase annual net returns by \$300 per acre, which is equivalent to approximately \$360 million across the approximately 1.2 million acres of irrigated cotton in the South Plains.

\*Rice breeding supported by our scientists has increased grain yield 93 lbs/yr and whole grain milling yield by 0.06%/yr. With today's market prices and acreage, this is equivalent to a \$3 million increase in net income or ca. \$120 million over the life of the breeding program.

**ADMINISTRATOR'S STATEMENT**  
81st Regular Session, Agency Submission, Version 1  
Automated Budget and Evaluation System of Texas (ABEST)

DATE: **9/3/2008**  
TIME: **2:33:22PM**

---

Agency code: **556** Agency name: **Texas AgriLife Research**

---

\*Our scientists have developed procedures to keep manganese, which clogs emitters in drip irrigation installations, in solution until it leaves the irrigation tapes. This could result in annual benefits of \$750,000 due to elimination of yield losses and could save up to \$5 million by not having to prematurely replace drip tapes.

\*We developed a method to interrupt vine-to-vine spread of Pierce's disease by controlling insect vectors. This has reduced disease spread in established vineyards and protects newly planted vineyards.

\*Our scientists released a new clover variety that, when overseeded on warm-season grasses, has a direct annual economic value of \$9 million in East Texas.

\*We jointly bred cottons with a naturally occurring gene for nematode immunity that annually causes over \$100 million of lost production and reduces quality.

\*We developed prescribed fire methods for woody plant management on rangelands that save \$20 to \$100 per acre when compared to chemical or mechanical treatments.

\*We released wheat varieties that potentially increase annual farm gate income by more than \$6 million.

\*We are developing protocols for incorporating distiller's grains into feedlot finishing diets at higher-than-expected levels that could increase annual profits by \$15 a head, which translates into more than \$1 million for a 35,000 head feedlot.

#### Improving public health and well-being

\*We developed a technique for processing tropical fruit juice from a Brazilian palm. This process is worth an estimated \$10 million to the U.S. food industry, and also results in a by-product rich in fruit oils that have naturally high antioxidant and bioactive properties. A patent-pending process was licensed to recover the antioxidant-rich oil estimated to be worth \$10-15 million annually to the food, dietary supplement, and cosmetic industries.

\*We developed training materials for food safety and Hazard Analysis and Critical Control Point (HACCP) training for more than 1,700 industry personnel from over 26 states and 8 countries, and have provided educational program for over 800 USDA inspectors.

\*Our scientists have shown dietary omega-3 fatty acids (like those found in fish oil) regulate transmission of information that alters cellular physiological responses. This has enhanced our ability to determine colon cancer risks.

\*Our scientists are assisting over 200,000 women to make healthy choices for themselves and 700,000 children by developing educational interventions regarding the new healthier food package offered by WIC. The new food package and educational interventions could result in an 8-9% decrease in morbidity of the most vulnerable population, which could save Texas over \$1 billion in Medicaid costs.

\*Our regulatory office performed over 1000 facility audits in FY2007 to ensure compliance with feed rules and to ensure grain elevators were testing for mycotoxins. Over 7000 samples were analyzed.

\*Our scientists are modifying cotton plants to produce seeds virtually devoid of a natural toxin, gossypol, while retaining this chemical in the rest of the plant for defense against insects and diseases.

This new seed can be used as feed for humans, pigs, poultry and farmed fish.

The following priority areas for agricultural and life sciences research for FY 2010-11 have been identified for our agency:

**Priority Need - Enhancing Research Capacity and Increasing Return on Investment**

The top priority for Texas AgriLife Research is to enhance our capacity by investing in people and facility upgrades; both of which will result in a greater economic return to the state. We will develop new young scientists, increase acquisition of external funds, enhance programmatic impacts, and attract and retain top quality scientists. We request resources (that we will match on a 1:1 basis) to attract and train graduate students at Texas universities, especially students from Texas. Our facilities throughout the state have outgrown their original research missions and we require larger and upgraded laboratory space, specialized instrumentation and equipment. Our ability to attract top quality scientists is compromised because our facilities are no longer state of the art. Our agency is not TRB-eligible.

**Priority Need - Safe and Healthy Food for Texas**

The goals of this research effort are to improve the safety and value of our agricultural products and to increase the availability of healthful foods to reduce disease incidence and enhance the quality of life for Texans. The food safety research will focus on key pathogens, e.g. E. coli O157:H7, Salmonella, and Campylobacter; quantify the impact of foodborne illness in the state; develop and test the efficacy of pre- and post-harvest intervention strategies to minimize foodborne hazards; and conduct research to minimize mycotoxins (e.g. fumonisin and aflatoxin) sometimes found in Texas crops that impact food quality and human health and can cause millions of dollars in crop losses. In terms of healthy foods, we will use traditional and molecular breeding techniques to optimize naturally occurring phytochemicals and bioactive compounds in Texas-grown fruits, vegetables and nuts, and other foods that have the potential to reduce the risk of cardiovascular disease, obesity, stroke and other acute/chronic diet related diseases. We will collaborate with scientists, clinicians, and physicians from selected Texas health science centers.

**Priority Need - Equipping Texas to Participate in Potential Carbon Economy**

The goals of this research are to develop best management practices, quantify sources of carbon, and develop background information for the design of scientifically sound carbon trading guidelines that accommodate Texas industrial and agricultural characteristics, while providing relatively low cost offsets to Texas industry.

Our scientists will develop Texas-based background information needed for design of a carbon-equivalent trading framework to allow farmers, agribusinesses, and the industrial sector to fully participate in dynamic carbon trading markets being proposed and implemented by national governments, U.S. federal agencies, and private interests; will evaluate the efficacy of agricultural practices (e.g. tillage and pasture management) on carbon storage in soils and plants; and will position Texans to utilize sequestration in a free market manner in the event of a regulatory environment related to carbon.

The trading of carbon could easily translate into billions of dollars exchanged worldwide between net emitters and net reducers of carbon. Stable, sound, balanced, and fair trading policies are needed to protect Texas agricultural producer and industrial interests. These policies must be based on science and account for the diverse production systems and regions of Texas. In this framework, Texas industries would be able to purchase carbon credits with assurance of legitimacy and Texas agricultural producers would be justly compensated for sequestered carbon. This effort supports the State's goal of increased economic development by providing a framework for the trading of carbon as a new commodity.

**ADMINISTRATOR'S STATEMENT**  
81st Regular Session, Agency Submission, Version 1  
Automated Budget and Evaluation System of Texas (ABEST)

Priority Need - New Technologies to Sustain Texas Water Quality and Quantity

The development and adoption of new technologies that conserve and protect water resources in both the agricultural and municipal sectors are critical to helping Texas meet its current and future water needs. This research program will expand and evaluate new technologies to detect biological, organic, and inorganic contaminants in Texas water supplies; develop best management practices to manage water flow and reduce water contamination by fertilizer, pesticides, bacteria, etc.; develop tools to detect or predict plant water stress and regional water shortages; develop more efficient methods for on-site delivery and use of water from a variety of sources in urban and agricultural environments; develop ornamental and crop plants that are more drought and/or salt tolerant; assist regional groups in managing water resources (e.g. managing water supplies to address endangered species issues); and address stormwater runoff in urban watersheds. In addition, this research will assist several state agencies who are mandated to implement water-related programs and are in need of quality science to properly implement the programs.

Agency Approach to Budget Reduction

The 10% budget reduction will be implemented by reducing allocations strategies and goals. Thus, the majority of the reduction will be taken from the "Agricultural/Life Sciences Research" strategy/goal. Cuts within each strategy will be based upon programmatic, fiscal, and personnel factors.

Other Matters

**Background Checks.** In 2008, AgriLife Research implemented an internal Rule that requires background checks for all external and internal applicants filling new or vacant budgeted, wage, student, or graduate assistant positions. This Rule is consistent with the Texas A&M System regulation governing background checks for current and potential employees. We are planning to conduct checks on existing employees in the near future.

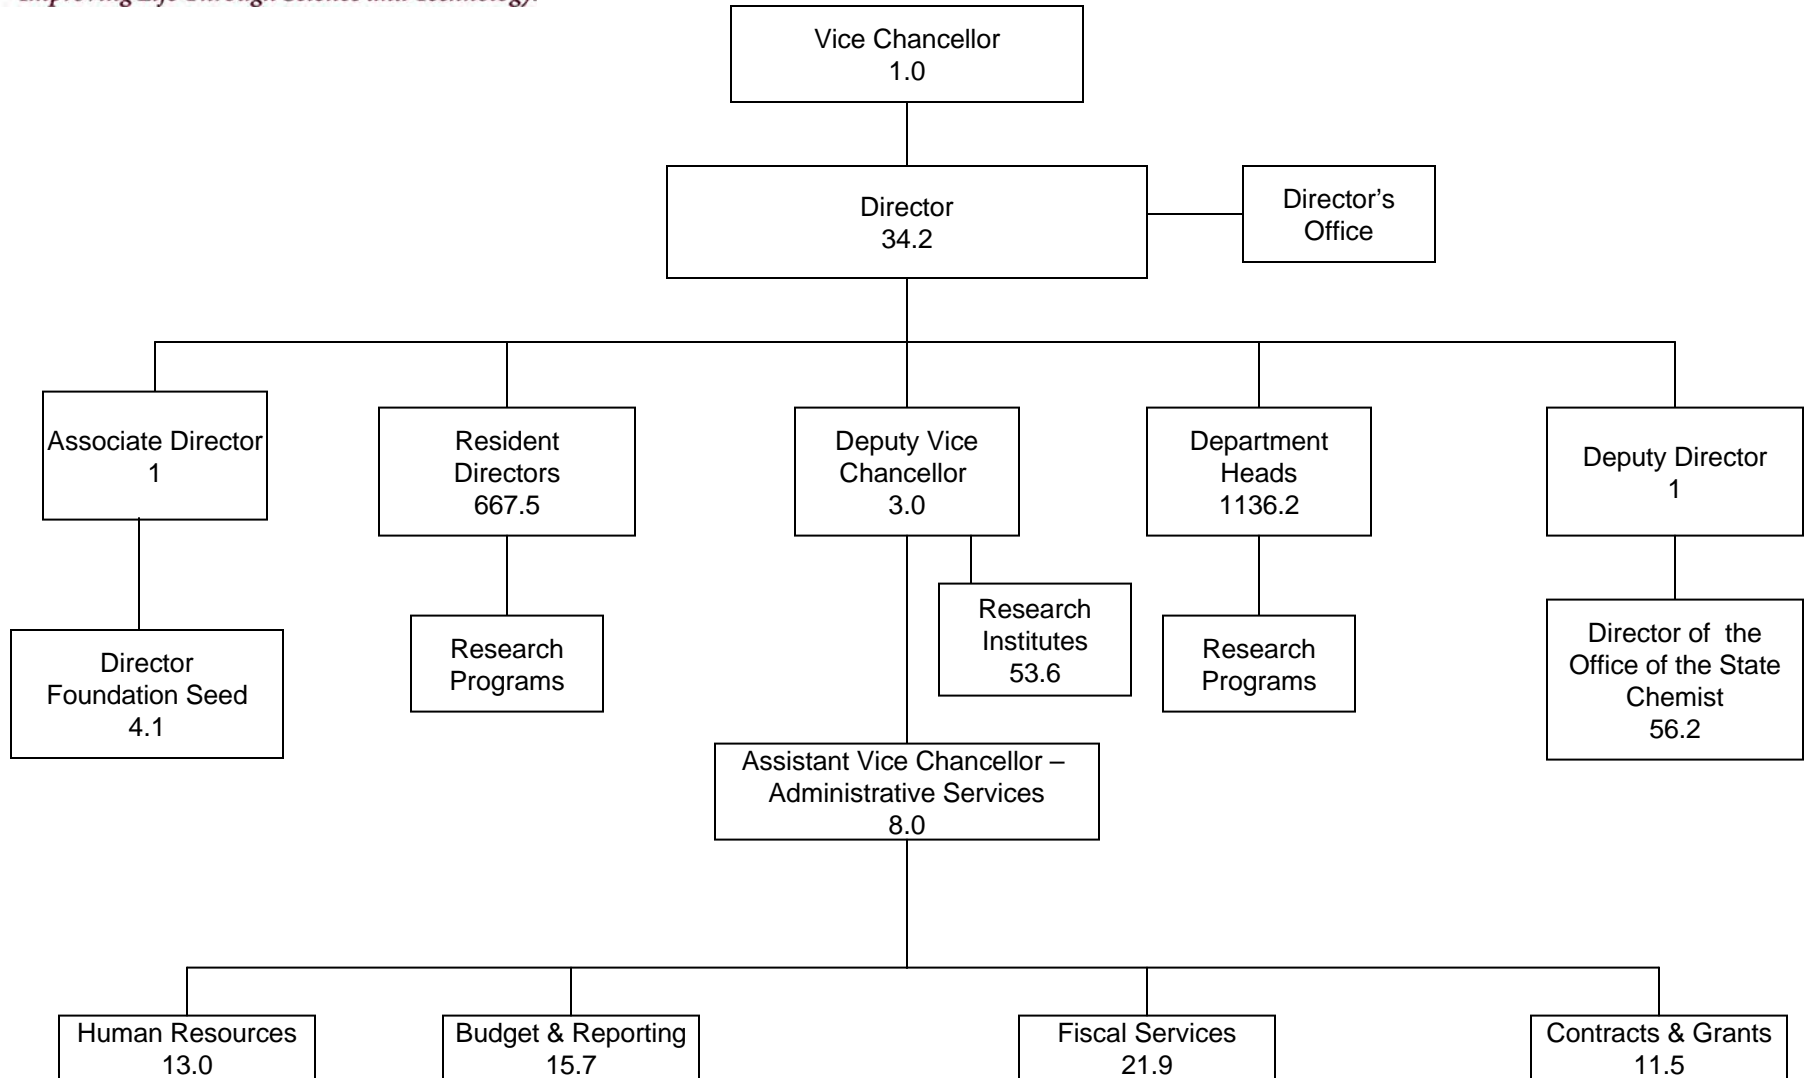

**System Initiatives.** The Texas A&M System is requesting support for the following priority needs for all of higher education:

- **Base Funding:** Fund growth in all higher education formulas and, using the Higher Education or another recognized cost index, fund the increased cost of doing business for our basic, on-going educational, general and student support operations. This includes providing increased base funding for our Texas A&M System Agencies' core operations.
- **Teaching Excellence:** Using student evaluations, recognize and reward outstanding faculty through the chancellor's Teaching Excellence Awards initiative.
- **Facilities Renewal:** Existing E&G and campus infrastructure have reached the point where the need to invest funds to renew these facilities is critical. This includes such projects as deferred maintenance; modernizing HVAC; plumbing, electrical and other systems; meeting current building, life safety, and energy codes; and others.
- **Student Financial Aid:** Provide increased funds for student financial aid to help make higher education more affordable for more Texas families, however, not at the expense of funding to the universities.
- **Incentive Funding:** We support accountability and performance through incentive funding so long as our base funding needs are covered first.
- **Research:** Increase research funding available to institutions by doubling the funds allocated through the Competitive Knowledge Fund and Research Development Fund.
- **Higher Education Group Health Insurance:** Fund the increases in health care costs and enrollment (employee/retiree) growth.

**STRATEGY DESCRIPTION AND JUSTIFICATION:**

Research in the Agricultural and Life Sciences area is essential to develop the knowledge and skills to ensure a strong Texas economy and to protect our natural resources. In particular, it provides benefits to Texas in the following manners: 1.) It enables Texas producers to be more competitive in the global economy by reducing production costs and by enhancing quality, marketability, and health attributes of agricultural products; and 2.) It improves environmental quality and helps sustain our natural resource base, even under increased environmental pressures (e.g. chemical and soil loadings into rivers) and rapid urban and rural population growth.

**EXTERNAL/INTERNAL FACTORS IMPACTING STRATEGY:**

External factors affecting this strategy include the availability of funding from external sources (e.g. industry and federal and state government agencies), increases in operating costs, new federal regulations, climatic conditions, and commodity prices. Internal factors impacting this strategy include low salaries resulting in losses of key research scientists and staff to other employers, lack of fiscal resources to ensure proper scientific equipment is available, and programmatic and fiscal redirections in response to our Roadmap that outlines our goals and objectives and in response to constituent input.

**STRATEGY DESCRIPTION AND JUSTIFICATION:**

The goal of this research is to develop improved systems for feedyard beef cattle production through efficient use of co-products from the rapidly expanding ethanol production industry in the Texas High Plains. Research objectives include defining the optimal and maximal substitution rates for wet and dry distiller's grains in steam-flaked corn diets for beef cattle; evaluating the environmental impacts of ethanol co-products; ensuring that food safety and meat quality are maintained when ethanol co-products are fed; and developing data and models to accommodate changes in composition and availability of ethanol co-products.

**EXTERNAL/INTERNAL FACTORS IMPACTING STRATEGY:**

External factors affecting this strategy include volatile prices for corn and fuel that could affect the quantity of distiller’s grains available for feeding, continued cooperation from our research and industry partners, and federal legislation affecting fuel ethanol standards.

Internal factors affecting this strategy include our ability to continue to form effective teams of key faculty inside and outside the Texas A&M System to focus on this problem, and low salaries affecting employee recruitment and retention.

**STRATEGY DESCRIPTION AND JUSTIFICATION:**

For a variety of reasons, Texas is an attractive over-wintering location for interstate bee operators of European Honey Bee (EHB). Also, Texas has seen the influx of Africanized Honey Bees (AHB). Issuing certificates for EHBs and assisting in detection of AHBs are critical aspects of supporting this industry and fulfilling this regulatory function of Texas AgriLife Research.

**STRATEGY DESCRIPTION AND JUSTIFICATION:**

Maintenance of a safe and reliable supply of fertilizer and foods is a critical component of the state's economy. Statistical sampling, prompt and accurate lab analyses, and follow up to ensure compliance with regulations are requirements to maintain a reliable level of interstate and intrastate trade. Regulations and procedures from this office are based on needs of and guidance from the user/consumer advisory committee.

**EXTERNAL/INTERNAL FACTORS IMPACTING STRATEGY:**

External factors affecting this component of Texas AgriLife Research's regulatory services include new federal regulations, new opportunities and requirements to partner with federal agencies, increasing operating costs, and the perception of business firms and consumers as to program's value. Internal factors affecting this strategy include low salaries resulting in loss of staff to other employers.

**DESCRIPTION / JUSTIFICATION:**

Texas AgriLife Research facilities and personnel are a critical component of the agency’s ability to serve Texas. The goals of this strategy are to develop new young scientists, increase acquisition of external funds, enhance programmatic impacts, and attract and retain top quality scientists through investment in personnel and facility upgrades. We request resources (that we will match on a 1:1 basis) to attract and train graduate students at Texas universities, especially students from Texas. In addition, our facilities have outgrown their original research missions and we require larger and upgraded laboratory space and specialized instrumentation and equipment. Our ability to attract top quality scientists is compromised because our facilities are no longer state of the art. The approximate 400 scientists employed by AgriLife Research generate about \$1.50 of external funding for every \$1 invested by the State. This strategy supports the State’s goals of furthering the development and application of knowledge through enhanced programmatic impact; will yield significant economic returns through increased leveraging of external funding for research; enhance the state’s scientific workforce by developing an increased number of graduate students; and allow for recruitment and retention of top scientists from around the country and world.

**EXTERNAL/INTERNAL FACTORS:**

External factors affecting this strategy include competing salaries for personnel from other states and universities, and rapidly increasing costs for equipment, construction, and renovation.

Internal factors affecting this strategy include our ability to properly re-design facilities and to identify high-priority research areas upon which we will focus, and low salaries affecting employee recruitment and retention.

**DESCRIPTION / JUSTIFICATION:**

The goals of this research effort are to improve the safety and value of our agricultural products and increase the availability of healthy foods to reduce disease incidence, lower medical care costs, and enhance the quality of life for Texans. The food safety research will focus on key pathogens, e.g. E. coli O157:H7, Salmonella, and Campylobacter; quantify the impact of foodborne illness in the state; develop and test the efficacy of pre- and post-harvest intervention strategies to minimize foodborne hazards; and develop methods to minimize mycotoxins (e.g. fumonisin and aflatoxin) sometimes found in Texas crops that impact food quality and human health and can cause millions of dollars in crop losses.

The healthy food research will use traditional and molecular breeding techniques to optimize naturally occurring phytochemicals and bioactive compounds in Texas-grown fruits, vegetables and nuts, and other foods that have the potential to reduce the risk of cardiovascular disease, obesity, stroke and other acute/chronic diet-related diseases. This research will enhance the value of key agricultural products (e.g. beef, poultry, grain, and fruits and vegetables) that contribute greatly to the state's economy. Texas food producers need scientific support to ensure the safest food supply possible, and consumers of these products deserve no less. Cardiovascular disease is the leading cause of death in Texas and hospital charges in Texas in 2003 were \$7 billion due to this disease. Research has shown that by just adding one serving of fruits and vegetables per day incidence of cardiovascular disease can be decreased by 4% to 7%. The costs of obesity to the state are in the billions of dollars.

This initiative supports the State's goals of furthering the development and application of knowledge through research that enhances a safe and healthy food supply and expands the agricultural economy.

**Texas AgriLife Research**

**CODE DESCRIPTION**

**Excp 2010**

**Excp 2011**

External factors affecting this strategy include potential outbreak of a foodborne illness that might result in a re-direction of our focus; federal or state legislation mandating reduced thresholds of pathogens in food and feed; weather patterns that result in a state-wide grain crop with high levels of mycotixins; and new scientific evidence linking various types of healthy foods with human wellness.

Internal factors affecting this strategy include our ability to form teams of key faculty and staff from throughout the Texas A&M System and from other parts of Higher Education to focus on this topic, and low salaries affecting employee recruitment and retention.

**DESCRIPTION / JUSTIFICATION:**

The goals of this research are to develop best management practices related to carbon sequestration, quantify agricultural sources of carbon, and develop background information for the design of scientifically sound carbon trading guidelines that accommodate Texas industrial and agricultural characteristics, while providing relatively low cost offsets to Texas industry.

Our scientists will develop Texas-based background information needed for design of a carbon-equivalent trading framework to allow farmers, agribusinesses, and the industrial sector to fully participate in dynamic carbon trading markets being proposed and implemented by national governments, U.S. federal agencies, and private interests; will evaluate the efficacy of agricultural practices (e.g. tillage, animal diet management, and pasture management) on carbon storage in soils and plants; and will position Texans to utilize sequestration in a free market manner in the event of a regulatory environment related to carbon.

Carbon trading could easily translate into billions of dollars exchanged worldwide between net emitters and net reducers of carbon. Stable, sound, balanced, and fair trading policies are needed to protect Texas agricultural producer and industrial interests. These policies must be based on science and account for the diverse production systems and regions of Texas. This effort supports the State's goal of increased economic development by providing a framework for the trading of carbon as a new commodity. In this framework, industries would be able to purchase carbon credits with assurance of legitimacy and agricultural producers would be justly compensated for sequestered carbon.

**DESCRIPTION / JUSTIFICATION:**

The goals of this strategy are to leverage our current efforts and target new statewide efforts to expand and evaluate new technologies to detect biological, organic, and inorganic contaminants in Texas water supplies; develop best management practices to manage water flow and reduce water contamination by fertilizer, pesticides, bacteria, etc.; develop tools to detect or predict plant water stress and regional water shortages; develop more efficient methods for on-site delivery and use of water from a variety of sources in urban and agricultural environments; develop ornamental and crop plants that are more drought and/or salt tolerant; assist regional groups in managing water resources (e.g. managing water supplies to address endangered species issues); and address stormwater runoff in urban watersheds.

The development and adoption of new technologies that conserve and protect water resources in both the agricultural and municipal sectors are critical to helping Texas meet its current and future water needs. Our scientists have a proven track record of developing new water saving technologies and management practices, and will significantly leverage funding received through this initiative from a variety sources. This strategy supports the State’s goals of furthering the development and application of knowledge through research and enhances an adequate and safe water supply. In addition, several state agencies are mandated to implement water-related programs and are in need of quality science to properly implement the programs.

**EXTERNAL/INTERNAL FACTORS:**

**B. Assessment of Fiscal Year 2006 - 2007 Efforts to Meet HUB Procurement Goals**

**Attainment:**

The agency attained or exceeded zero of six applicable statewide HUB procurement goals in FY 2006. The agency attained or exceeded zero of six applicable statewide HUB procurement goals for FY 2007.

**Applicability:**

**Factors Affecting Attainment:**

- In fiscal years 2006 and 2007 the goals for the "Heavy Construction", "Building Construction", and "Special Trade Construction" category were not met, although HUB vendors were solicited for the projects and all prime contractors were encouraged to subcontract with HUB vendors. Many of these projects were of a specialized nature, and in areas with lower HUB availability.
- In fiscal years 2006 and 2007 the goal for the "Professional Services" category were not met. These expenditures were non-biddable, small dollar purchases.
- In both fiscal year 2006 and 2007 the goal for the "Other Services" category was not met, although all biddable services, not requiring manufacturer-only repair and maintenance, were bid to HUB vendors. A large portion of these expenses were to specialized agricultural associations, or other agriculture related services.
- In both fiscal year 2006 and 2007 the goal for the "Commodities" category was not met, although agency purchasing staff made every effort to find responsive, competitive HUBs.
- Of the HUB vendors solicited for bids or proposals: 86.7% (2006) and 77.3% (2007) failed to respond.

**"Good-Faith" Efforts:**

The agency made the following good faith efforts to comply with statewide HUB procurement goals per 34 TAC 20.13(c):

- The agency participated in, and co-hosted, Economic Opportunity Forums in an effort to identify potential HUB vendors.
- The agency required more than the required two HUB solicitation in every biddable situation regardless of fund type.
- The agency provided training to agency purchasing personnel, faculty and staff regarding accessing the CMBL and the Certified HUB lists to identify HUB vendors.
- The Agency HUB Coordinator actively recruited local HUB vendors, worked with the local Small Business Development Center to identify prospective HUB vendors, and assisted several in the certification process.

**6.A. HISTORICALLY UNDERUTILIZED BUSINESS SUPPORTING SCHEDULE**

81st Regular Session, Agency Submission, Version 1

Automated Budget and Evaluation System of Texas (ABEST)

Date: **9/3/2008**

Time: **2:43:35PM**

Page 70

- The agency HUB Coordinator provided monthly HUB Reports to unit purchasers along with HUB vendor information on areas where utilization was low.

**SUMMARY OF SPECIAL CONCERNS/ISSUES**

---

**Assumptions and Methodology:**

Federal funds support reflected for fiscal 2009 and beyond is based on expected level funding from Congress to USDA. Actual appropriated funding is not determined until the total federal budget is passed and notification to AgriLife Research can come as late as March of the affected fiscal year.

---

---

Agency code: 556	Agency name Texas AgriLife Research					
<b>CFDA NUMBER/ STRATEGY</b>	<b>Exp 2007</b>	<b>Est 2008</b>	<b>Bud 2009</b>	<b>BL 2010</b>	<b>BL 2011</b>	

---

**Potential Loss:**

Loss in general revenue funding does limit available matching funds to allow agency to apply for federal competitive grant opportunities that benefit the State of Texas. Further, there is a congressional proposal to move a portion of additional Hatch funding from annual appropriated formula funding to a competitive bid process that could significantly impact AgriLife Research.

**USE OF HOMELAND SECURITY FUNDS**

The Institute for Countermeasures Against Agricultural Bioterrorism organizes and facilitates our activities to broadly engage in research, education, and outreach to address the key needs for planning, surveillance, protection, emergency response, and recovery from intentional or accidentally introduced food, animal, and plant disease. The National Center for Foreign Animal and Zoonotic Disease Defense harnesses the existing intellectual and research capacities of selected American Universities, including Texas A&M, on both an immediate and sustained basis, to fill gaps in existing knowledge in agricultural biosecurity as it relates to foreign animal and zoonotic disease, thereby heightening protection of the US animal agriculture.

12							\$ -				
<b>Agency Biennial Total</b>			<b>\$ 10,068,002</b>	<b>\$ 100,000</b>	<b>\$ -</b>	<b>\$ -</b>	<b>\$ 10,168,002</b>	<b>113.7</b>	<b>0.0</b>		<b>10.0%</b>
<b>Agency Biennial Total (GR + GR-D)</b>			<b>\$ 10,168,002</b>								

**Rank / Name**  
**Explanation of Impact to Programs and Revenue Collections**

**1** Indirect Administration  
This reduction would result in a loss of 14.7 FTE's, resulting in a loss of separation of duties, delays in timely reporting, and delays in timely payments.

**2** Infrastructure Outside Brazos County  
This reduction would result in reduced maintenance on building and facilities around the state.

**3** Feedyard Beef Cattle Production  
If we realize a 10% cut, this would result in a loss of funding for wages (3 part-time workers) and operating. For example, we are constructing a new facility that could be delayed if this cut occurred.

**4** Agricultural & Life Sciences Research  
If funding was reduced by 10%, AgriLife Research's research capacity would be narrowed and limited in its ability to respond to emerging problems, scientists and staff positions would be eliminated, and research locations may need to be closed. This reduction in general revenue and the resulting reduction in scientists would further result in a loss of \$16.5 million over the biennium in externally-generated revenue due to contracts and grants and intellectual property not acquired or generated as a result of scientist losses, and would result in additional losses to the state in the future due to the lack of technologies and generating grants and contracts that bring new dollars to Texas and create economic activity and other jobs (multiplier impact). It is through the scientists that Texas maintains a comparatively favorable position in the global economy.
